S.No.	Application Project Titles	Technology
1.	<p>STASH OVERSIGHT STRUCTURE</p> <p>The main aim of the Stash Oversight Structure is to maintain the equipment details for representatives of the company and display the equipment reports in the web sites, and there by tracking the flow of the business to the vendors, independent of the location.</p> <p>This module deals with the maintenance of equipments of the company through an automated algorithm. The equipments should also be monitored for faults, upgrades, performances etc. The system follows a tree structure to classify the types of equipment used in a plant. The specifications, meters, measurement points, can be entered in a separate event. All equipment that belongs to this equipment type inherits these attributes by default. The location of equipments in a facility can be entered in to the system in hierarchical / tree structure. In addition, equipments are linked to its own record. The user can drill down / expand the hierarchical structure, identify particular equipments, and then access the relevant record of the equipments. Specific equipment is identified with either a manufacturer given serial no given in name plate or a user specified number. Equipments have an equipment ID in the system. It inherits the data from the type of equipment it belongs to. Using these steps the performance, faults should be tracked, for a machine.</p>	DOT NET
2.	<p>ADVERTISEMENT MANAGEMENT SYSTEM</p> <p>The project Advertisement is used for maintaining the advertisement for each and every customer who has providing advertisement to the company. Each and every customer has own advertisement. Before providing schedule to the customer the administrator gets the full information about the customer meanwhile the employee</p>	DOT NET

	<p>details are also maintained here. Employee maintaining the advertisement according to the customer.</p>	
3.	<p>CALL CENTER AUTOMATION</p> <p>The project “Call Center Automation” automates the operations of a call center by giving replies to the customer’s queries. By adding more entries to the data base store, the application can respond to more number of queries from the customers. The importance is given on giving correct reply to the input queries.</p> <p>The process of the call center management can be easily explained by means of the Data Flow Diagram. The project gets the queries from the various customers and stores them in a centralized data store. When there are number of queries the queries are stored up in a queue and then the queries are processed one by one. There are separate blocks called data recognizer for recognizing the data, i.e. queries, and data interpreter for interpreting those queries. The input query from the customer is first recognized by the data recognizer by comparing with the entries in the data base store. In the database the solution for each and every query is stored and maintained. Then it is interpreted as what type of query it is and how it should respond to the query. The input query is compared with the queries in the database store. The solution for the input query is founded. The information service switch switches the application between different types of distributed services. The final result, the reply to the customer’s query is obtained at the end.</p>	DOT NET
4.	<p>TRAVELS MANAGEMENT SYSTEMS</p> <p>The project Travels Management System is used for maintaining the Travels for each and every Customer who have involved in the travels management company. Each and every customer has own personal information and also having Travels, Driver, Vehicle and trip sheet information. Before providing Travels to the customer, the administrator has gathering customer personal information.</p>	DOT NET
5.	<p>CONTENT MANAGEMENT SYSTEM</p> <p>Content management system is a system used to manage the content of a web site. Content management systems are deployed primarily for interactive use by a potentially large number of contributors. Content Management means web content Management.</p>	DOT NET

	<p>The content managed in this application includes computer files, image media, audio files, electronic documents and web content. The theme behind a CMS is to make these files available inter-office, as well as over the web. A Content Management System would most often be used as an archive as well.</p> <p>CMS would be used to store files in a non-proprietary form. This application can be used to share files with ease, as most systems use server-based software, even further broadening file availability. This application includes a feature for web content, and some have a feature for a workflow process.</p> <p>This application facilities the organization, control, and publication of a large body of documents and other content, such as images and multimedia resources. A web content management system is a content management system with additional features to ease the task requires publishing web content to web sites.</p>	
<p>6.</p>	<p>CROP MANAGEMENT SYSTEM-PRODUCT</p> <p>The project Crop Management System is used for maintaining the customer, product and invoice details of the company. Admin is the main people who manages all the details in the company and register the customer, product and invoice details. Project keeps entire database collection of customer, product and invoice details. Project all keeps track of the invoice and payment details based on the product sold etc.</p>	<p>DOT NET</p>
<p>7.</p>	<p>CROP MANAGEMENT SYSTEM- CUSTOMER</p> <p>The project Crop Management System is used for maintaining the customer, product and invoice details of the company. Admin is the main people who manages all the details in the company and register the customer, product and invoice details. Project keeps entire database collection of customer, product and invoice details. Project all keeps track of the invoice and payment details based on the product sold etc.</p>	<p>DOT NET</p>
<p>8.</p>	<p>CHORE ALIMENTATION SYSTEM</p> <p>This module deals with the maintenance of work flow of the company. The work should be divided and assign to each and every employee. The system follows a tree structure to classify the types of equipment used in a plant and as well as work flow of the company. The manager will assign the job to his/her assistance. Department manger could divide the work and assign to the workers. Here we have purchase the items and manufacture the product and deliver the product. We have also</p>	<p>DOT NET</p>

	maintained the plants information. Admin will maintain the asset details.	
9.	CROP MANAGEMENT SYSTEM- DISTRIBUTOR	DOT NET
10.	<p>ENTERPRISE INFORMATION SYSTEM</p> <p>Enterprise Information System is an enterprise-wide information system designed to coordinate all the resources, information, and activities needed to complete business processes such as order fulfillment or billing.</p> <p>EIS system supports most of the business system that maintains in a single database the data needed for a variety of business functions such as Manufacturing, Supply Chain Management, Financials, Projects, Human Resources and Customer Relationship Management.</p> <p>An EIS system is based on a common database and a modular software design. The common database can allow every department of a business to store and retrieve information in real-time. The information should be reliable, accessible, and easily shared. The modular software design should mean a business can select the modules they need, mix and match modules from different vendors, and add new modules of their own to improve business performance.</p> <p>The project ERP Management system is used for maintaining the product and purchase information for each and every vendor who has registered himself into the system of ERP management. Each and every vendor has own records. Before assign the product to vendor, product and vendor details are collected.</p> <p>A ERP management system is used to affect the product purchase through vendors including purchase, sales, returns, payment, damage of product. Each purchase of the product tax is assigned .margin has been set for the product and vendor. Master database has been created to keep track of entire details of vendors, product registered and the related information such as payments, returns, information about the damage product registered by the vendors.</p> <p>It maintains the reports of the individual's reports day by day. Increased visibility into actual time spent on tasks of enrolment and payment phase of any management.</p>	DOT NET

<p>11.</p>	<p>HOTEL MANAGEMENT SYSTEM</p> <p>The project Hotel Management System is used for maintaining the information for each and every customer, employee, driver and product. Each and every customer has own personal details and the products are transferred through the driver. Before providing the product to customer, the administrator gathering necessary information about the product meanwhile the invoice is also raised for the customer's product.</p>	<p>DOT NET</p>
<p>12.</p>	<p>DEALER MANAGEMENT SYSTEM FOR PETROLEUM REFINERIES</p> <p>Dealer Management System is to bring much needed efficiency to dealership operations, department by department, person by person. Whether it may be large dealer group with multiple franchises and locations, even spanning geographic boundaries. This tools help's to reduce operating costs and will help Dealer to focus on their area of expertise.</p> <p>Dealer Management System delivers complete, fully integrated, dealer management systems to dealers across the Geographical location. The full featured, Dealer Management System can save a dealership thousands of dollars a month in support and maintenance, without giving up any important functions. Dealer Management System is the Internet based Application with all of the same features. They include Employee details, sales prospecting, Bank Transaction, service, Balance Sheet, monthly sales details, service tracking, daily sales details, shop detail, accounting and payroll etc.</p> <p>This application automates the human resource procurement procedure. It mainly aims at computerizing the recruitment process. This computerized application automates operations of job search and job posting online.</p>	<p>DOT NET</p>
<p>13.</p>	<p>SIMPLE HOSTING SOLUTIONS</p> <p>Simple Hosting Solutions is a web-application, especially suited for anyone that needs to track clients and/or support requests and/or orders and/or invoices. The general label of billing manager or client manager does not really describe Simple Hosting Solutions because it performs various other tasks not found in these common packages. Simple Hosting Solutions provides additional CMS functions such as articles, contact forms, FAQ, content pages, site search, admin defined side</p>	<p>DOT NET</p>

	<p>menu columns (customized down to the individual link for access by all, client, or admin), and much more.</p>	
<p>14.</p>	<p>HUMAN RESOURCE INFORMATION SYSTEMS</p> <p>The company can post a job, as well as the candidate can post his resume. This application makes the searching process more efficient. This application provides global service, so that anybody around the world can access the information. The candidate any where in the world can get to know about the job openings, this provides online information on job posting and job searching. This application helps the company helps to place qualified and eligible candidates.</p> <p>Any company can put their advertisement in this site, so that they improve their sales and viewers will get more information about the company. They will be charged to put their advertisements.</p>	<p>DOT NET</p>
<p>15.</p>	<p>INVENTORY</p> <p>We use the computer technology in many ways, from visible to invisible spectacular to routine, video games and special effects for films and television to microwave ovens, electronic cameras, and automobile ignition systems. In business too, computers and information systems occupy a special place. Computer makes possible. The smooth and efficient operation airline reservations, hospital record departments, accounting and payroll functions, electronic banking, telephone switching systems and countless other operations both large and small.</p> <p>Technology has developed at a very fast rate, but the most important aspect of any system is the human know-how and the use of ideas to gear the computer. So that it perform required task. This process is essentially what system development is all about. To be of any use, a computer based information system must function properly, be easy to use, and suit the organization for which it has been designed. Automation is done in many firms. In this project what we have done is automated an inventory Management system.</p> <p>In this project we deals with many aspect of inventory management such as business information, income and profit information, sales invoice, and customer detail. Branch information, warehouse management, stock management, product list, stock monitoring, stock exchange, employee records, and reports the entire</p>	<p>DOT NET</p>

	<p>department.</p> <p>Our project has been designed for the processing of up to date information related to inventory management and to have a fast processing of information collected in the database.</p>	
<p>16.</p>	<p>JOB ORDER SYSTEM</p> <p>This software allows this department to achieve their target. Preplanning will increase production at a determined period of time, which will bring out well-planned quality production. This software has been developed using Visual Basic.Net as a front end and Ms-Sql Server as a back end.</p> <p>This Project may contain the following modules:</p> <p>Job Order System Productivity Evaluation Production Process</p>	<p>DOT NET</p>
<p>17.</p>	<p>MANAGEMENT INFORMATION SYSTEM</p> <p>The project Management Information System is used for maintaining the information for each and every customer, employee, driver and product. Each and every customer has own personal details and the products are transferred through the driver. Before providing the product to customer, the administrator gathering necessary information about the product meanwhile the invoice is also raised for the customer's product.</p>	<p>DOT NET</p>
<p>18.</p>	<p>PATIENT CARE SYSTEM</p> <p>This web based product is designed to addresses the critical requirements of health care system. This project enables better patient care, patient safety, and efficiency. This software is for hospitals and health care organizations. It is designed to integrate the different information systems existing in these organizations into one single efficient system.</p> <p>This project will support multi location implementation, wherein the hospital has Outpatient, Inpatient and other services in many physical locations.</p> <p>This project provides enquiries about the patient, the patient's location, admission,</p>	<p>DOT NET</p>

	<p>and appointment scheduling, treatment details, patient's case history and discharge details with bill. Medical Record such as case history of the patient keeps an abstract of clinical data about patients. It allows easy retrieval of medical records on patients.</p>	
<p>19. PAYROLL</p>	<p>Payroll is a window Application which is used to maintain the Employee details of the organization or concern in different places; this provides each employee details with unique information.</p> <p>Admin plays the main roll to maintain the activities of the employees, client part takes lesser activities, and this system is user friendly GUI based application that will automate the day to day activities of the employees who are working in the concern. An application for completely automating the different activities of the various departments or sections of the employees is processed.</p> <p>Payroll provides database activities each and every records of the employee are maintained in the database, so all the data are retrieved easily and faster. As the means of administrator point of view, the admin person have the full rights to make decisions like who are all the users and creating the statuses, views and modify employee details.</p>	<p>DOT NET</p>
<p>20. PHARMACY MAINTAINER SYSTEM</p>	<p>The project Pharmacy Maintainer System is used for maintaining the sales and purchase entry for each and every customer who has involved in the shop. Before sale the tablet to customer, the administrator has entered their details in the customer entry meanwhile the pharmacy owner maintaining the supplier entry also</p>	<p>DOT NET</p>
<p>21. SALES AND PURCHASE</p>	<p>Shopping is an Application for the users to buy products; this application facilitates the buyers being able to post their buying requirements.</p> <p>This is a Client Server Application designed by keeping in view the various activities that are performed by the user, the user can buy different products depending upon the product codes and the amount can be calculated. User can buy number of products and they are added to the shopping cart.</p>	<p>DOT NET</p>

	<p>Shopping plays the main role of client and admin, Admin has the overall activities of CRUD operations having all the details of product and client activities can also be performed.</p>	
<p>22.</p>	<p>TIME REPORT MANAGEMENT SYSTEM</p> <p>Time report management System used for maintains performance of the individuals and teams. Powerful real time graphical reporting engine for timesheets. Generate standard or custom reports.</p> <p>A project planning tool is used to affect the project plan including a plurality of tasks to be performed by the users in accordance with respective time schedules. The network is configured for translating the project plan into the master database to affect an assignments table including a list of project tasks assigned for completion by each of the users. Time sheets are periodically prepared in the master database from the assignments table and include a list of the project tasks assigned to a respective user and a time period record for recording time entries therein. Actual time expended in performing the tasks is fed back to the project plan for managing completion of the tasks in accordance with the time schedules. In a preferred embodiment, a funding source is mapped to the project plan so that cumulative labor cost may be tracked based on actual time expended for the project tasks.</p> <p>Assign the project into various teams and estimate the maximum time and cost of the project. It maintains the daily reports of the individuals. Increased visibility into actual time spent on tasks and projects Integrates with leading project management, accounting, ERP and Payroll software. Employees can submit time off requests online</p>	<p>DOT NET</p>
<p>23.</p>	<p>E -DEFECT TRACKER SYSTEM</p> <p>E- Defect tracker is designed for tracking out the bugs in the software product, assign bugs to team members, generate bug reports send email messages between users, attach files, and customize their accounts according to their needs. When a project becomes more large and complex a formal method for tracking out a bug is necessary. Therefore an application for the bug tracking is needed</p> <p>The roles maintained in this application are</p> <ul style="list-style-type: none"> Administrator Project manager Team leader 	<p>DOT NET</p>

	<p>Developer</p> <p>Depending on the functions of these roles the workflow and modules are maintained. Administrator maintains the details of projects and employees.</p> <p>Project Manager deals with the bug and assigns the complaint to appropriate team leader or the developer. User views the status of the projects and their lower categories projects.</p> <p>Various reports are generated during report period. Reports are generated by bug wise, project wise, team wise and individual person performance. Monthly and weekly reports also generated.</p>	
<p>24.</p>	<p>NON PROFIT TECHNOLOGY RESOURCES</p> <p>Non Profit Technology resource is an application, used for service providers and buyers.</p> <p>This application facilitates the service buyers being able to post their buying requirements and the service providers being able to place their best bids in order to get the job.</p> <p>This is a client-server application designed by keeping in view the various activities that are performed between service buyer and service provider. Service buyer may be an individual, small scale industry or organization, which deals with any business activities, which may require software application; they can post their own requirement in our portal. Service provider may an individual, small scale business or an organization, who bids on the requirement provided by the service buyer. Then the buyer may choose a service provider to complete the work.</p>	<p>DOT NET</p>
<p>25.</p>	<p>PRODUCTION PLANNING AND CONTROL</p> <p>This project (Production Planning and Control) aim is to simplify your day-to-day work. There are a range of functions and reports that provide extensive information on all materials with their stock data.</p> <p>The main process involves Goods Receipts, Goods Issue, details about stocks and the warehouse contents are stored into the database. They are updated accordingly in the system.</p> <p>The project consists of various modules such as raw materials, vendor details,</p>	<p>DOT NET</p>

	<p>purchase order, repair section, quality inspection etc. Each one performs its own process.</p> <p>However, the main objective of the project is purchasing raw materials from the vendors and assembling them as finished products for purchase. These products after quality inspection (i.e.) in case of any damage are sent back to the assembling section, and if not, are sent to the warehouse for sales.</p> <p>Individual reports are provided for each module, these includes various stock transactions</p> <p>Reports are provided as day wise, month wise, as weekly reports and so on.</p>	
<p>26.</p>	<p>AUTOMOBILE AUTOMATION SYSTEM</p> <p>Automation is the act of implementing the human process with advanced technical software available in the market. In general, "automation replaces human workers by machines". Automation will likely increase the frequency with which humans interact with business processes "this is similar to robotic equipment" and another greatest advantage of the automation process is that the automation processes are less prone to errors.</p> <p>This Automobile Automation system, mainly concentrates on maintaining perfection in records about the sales of spare parts and the Vehicles in the automobile store at the best possible total cost of ownership in the right quantity, at right time, in right place for the direct benefit between seller and the buyer. It avoids the classical way of maintaining the records.</p> <p>This project has to handle certain amount of data, which should be in hand. The data includes are like Customer details, Spare parts and the Vehicle Details, including the employees in the Organization.</p>	<p>DOT NET</p>
<p>27.</p>	<p>BUDGET PLANNER</p> <p>This project is aimed at developing a system by which the employees in the organization submit the bills to their managers. The bills could of various types and also of various amounts. The employee after submitting the bill will automatically provide the manager's name to which the bill will be submitted. The bill will pass through a workflow process and the owner of the bill can view the status of the bill at any time. An email will be sent to the concerned people to let them know about the status of the bill.</p>	<p>DOT NET</p>
<p>28.</p>	<p>VISA PROCESSING</p>	<p>DOT NET</p>

	<p>The core idea of this project to minimize the paper work and centralize the data. Using this project we can centralize the data and provide the security to the data. We can secure the data loss also.</p> <p>The project “CENTRALIZING THE VISA PROCESSING” deals with the analysis of human resource and manual maintenance, easy approval, renewal of visa and fee payments. So once we got the visa we verify it from any place and send the remainder through mail to renewal of visa. It generates reports as the output. Passport must have minimum 6 months validity at the time of applying for an Entry Permit.</p>	
<p>29.</p>	<p>BANK GLOBAL ACCESS SYSTEM</p> <p>The main objective of this system is to let any customer to set the GAID (Global Access ID) through web and make use of all banking services. This system let the global banks to set their GPSI (Global Party System Index) and also provides the flexibility to access customers transactional details globally using PI(Party Identifier).The customer can do all the necessary banking operations also like bill payments, money transfer, deposit of money irrespective of the location.</p> <ul style="list-style-type: none"> • This provides a mechanism for customized customer access to electronic services through multiple portals. • The Global Access ID helps a customer to access his/her account throughout the globe with irrespective to the location. • The PI is a unique number, which acts as the “key” for component access. 	<p>DOT NET</p>
<p>30.</p>	<p>e-COMMUNITY</p> <p>E-COMMUNITY is a free online, international peer-reviewed portal covering topics in the field of events, discussions, articles, etc.</p> <p>This project is an all-purpose solution; it provides information on different issues that are suitable for a union, Association, firm, nonprofit organization or any type of similar organizations.</p> <p>It packs all the useful information related to above said organizations in one module. So it is very simple to build the community.</p>	<p>DOT NET</p>
<p>31.</p>	<p>INTELLIGENT USER GROUP</p> <p>Intelligent user group is an on-line web application project, with user friendly environment, to provide technical knowledge transfer between various sections at technological experts across the globe with the motive of service.</p>	<p>DOT NET</p>

	<p>The project is developed as a web portal with asp as server side script tool and html and vb script as client side script with i.e./Netscape and web browser. The portal is installed and configures in Internet Information Server.</p>	
<p>32. ONLINE SHARE BROKER</p>	<p>Online Share Broker was created to help you manage your investment with maximum simplicity and ease. With a few clicks you will be able get trading or transaction in order and your portfolio performance quantified. This web application reflects your portfolio's position based on the information you provide it with. Online Share Broker is designed for those who have little or no understanding of shares and is designed to arm you with a basic entry-level understanding of share Market.</p>	<p>DOT NET</p>
<p>33. WORKFLOW</p>	<p>Workflow is an IT technology which uses electronic systems to manage and monitor business Processes. It is a set of programs that aids in the tracking and management of all the activities in a project from start to finish. Workflow is, the procedural steps, the people involved, the required input and output, and the tools needed, for each step in a business process.</p> <p>Workflow helps you automate a range of business tasks, and electronically route the right information to the right people at the right time. Users are notified of pending work, and help managers route approvals through the system quickly</p>	<p>DOT NET</p>
<p>34. ONLINE CARRIER GUIDANCE AND PLACEMENT UNIT</p>	<p>This project is aimed at developing a web-based and central recruitment Process system for the HR Group for a company. Some features of this system will be creating vacancies, storing application data, and Interview process initiation, Scheduling interviews, storing Interview results for the applicant and finally Hiring of the applicant. Reports may be required to be generated for the use of the HR group.</p> <p>This project 'Online Carrier Guidance and Placement Unit' is an online website in which jobseekers can register themselves and then attend the exam. Based on the outcome of the exam the jobseekers will be short listed. For fresher, the exam will be conducted at some venue after short listing of the preliminary Aptitude Test. The</p>	<p>DOT NET</p>

	<p>details of the examination, venue & Date of the examination will be made available to them through the website.</p>	
35.	<p>ENTERPRISE RESOURCE INFORMATION SYSTEM</p> <p>Enterprised Resource Information System (ERIS) is a computerized solution for recruiting agencies and software consultants. This application maintains electronic database comprises of job applicants, workers and employers. User of this system can create and access details of all the information using advanced GUI screens comprises of menu, bitmap toolbars, status bar and many more. This is an Intranet application, which is used by a consultant to maintain his clients and employees status and schedule interviews for applicants.</p>	DOT NET
36.	<p>CORE BANKING/ONLINE BANKING</p> <p>The Online Banking is an application that has been developed for a well-established regional bank operating primarily in south India. The bank has several branches in key cities and towns in the north. In the world of this competitive environment and technological development, the bank has been totally computerized in the last 3 years, and to increase its customer base has started planning, for a concept called as e-banking; with this concept the bank wants to move very nearer to the customers and increase its basic operational strategies. Through Online Banking the bank wants to introduce the core concept of IT based Enabled Services (ITES). The Online Banking services are executed only upon the customer, and these Online Banking services would fully integrate with the core banking solution that is already in usage. The major idea is to provide a series of services to the customer through the internet, and make the customer feel flexible in calling out simple tasks faster instead of making visit to the bank every time. The Online Banking service is open only to savings bank. Customers and not for current account holders. The customer is privileged to use most of the system only as a viewing phase, the only online transactions the customer can do are chequebook requisition and fund transfer among his personal accounts.</p>	DOT NET
37.	<p>ONLINE RESULTS</p> <p>The “online results” projects meant for inter board activities to provide environment to deliver results of different streams in the intermediate. This project has to provide such facilities that it has more users interface and make it cover all the</p>	DOT NET

	<p>requirements of organization that want to deliver the results of intermediate.</p> <p>The Board of Intermediate conducts a test to the students who are doing their Intermediate (+2). For this they conduct a test. The test result will be released for the correction.</p> <p>For this the organization maintains data about the results in different streams. Their personal hall ticket numbers, total marks in different streams, all the students who are passed in different districts in different streams will also be displayed according to the user views. It maintains all the details about the students.</p> <p>The organization does all these manually. It writes down the data about the students, their results in the records. All this is a very tedious job requiring everything to be done manually.</p> <p>Online results addresses all these by automating many of the tasks of the organization. It relieves the employees by letting them do all the tedious jobs electronically</p>	
<p>38. ONLINE AIR TICKETING</p>	<p>The advent of computers has made man life happier. Every transaction in the world is becoming Online. A person can simply sit on a computer and can peep into the world through a simple computer screen and on a single mouse click he can explore the world of business.</p> <p>This says that every transaction is becoming simple and at the same time becoming faster. In order to be a part of this simplification and rapid evolution of world of business, we came up with a simple and at the same time a subtle concept of flight ticket reservation.</p> <p>The Current project"ONLINE AIR TICKETING" deals with the day-to-day booking and cancellations of flight tickets running throughout India. Any person can simply sit on a computer and can do booking and cancellation of a flight ticket through a single credit card.</p>	<p>DOT NET</p>

<p>39.</p>	<p>ORGANIZATION INTERNAL SURVEY</p> <p>It's an intranet application. The main concept for developing the project is conference on the net. We can compare the net Conference with the telephone conference. Only the allowed employees can login, and have conference with other allowed employees and individual conclusion is made.</p> <p>It is having mainly two modules. One is at Administration Level and other one is of Employees. It maintains authentication in order to access the application. Administrator task includes Employee Registration i.e., new employee recruitment will take place. News and information about company can access employee.</p> <p>Authorities will refer the complaints that are given by employees. Issues will put in front of related employees to get proper solutions. For selecting higher posts Elections will be conducted.</p> <p>The user modules include reading and checking notice and displayed issues. Employees can register complaint against management. Every employee can participate in the elections. Nominees can put their promise on net through canvas module. Results will be displayed for every issue. On issue an employee can vote only for once. It generates all the related validations.</p>	<p>DOT NET</p>
<p>40.</p>	<p>AD SERVER</p> <p>An ad server is a computer server, specifically a web server that stores advertisements used in online marketing and delivers them to website visitors. Ad serving describes the technology and service that places advertisements on web sites. Ad serving technology companies provide software to web sites and advertisers to serve ads, count them, choose the ads that will make the website or advertiser most money, and monitor progress of different advertising campaigns. An ad server is the name for the organization, hardware, and software that deliver advertising creative to the user's browser. An ad server solution is a powerful online ad serving technology solution for publishers, online retailers, and other media properties.</p>	<p>DOT NET</p>
<p>41.</p>	<p>BUDGET ANALYSIS</p> <p>Budget analysis is a useful web application that helps all sorts of business firms. The main strategy of the project is to automate the excel data and calculations into RDBMS to make data retrieval and manipulations easier. The</p>	<p>DOT NET</p>

	<p>application is done using ASP.Net and we have used SQL Server as the back end to make it more powerful. The main features of budget analysis are:</p> <ol style="list-style-type: none"> 1. Fast excel file parsing 2. Project wise summary report 3. Date range summary report 4. Month wise summary report 5. Year wise summary report <p>The application is build kept in mind that any users will find to use it friendlier. We just need to upload the excel file into the application through the friendly user interface provided and the application, will parse the excel file into the database for calculations and manipulations. The users are also given the facility to create a new project by themselves which helps them to handle the excel applications into the database more friendly.</p>	
<p>42. CAREER MART</p>	<p>Career Mart is a web application that provides a platform for candidates seeking job and the employers to share their needs.</p> <p>The candidates seeking job (referred as job seekers now onwards) can perform following operations:</p> <ul style="list-style-type: none"> • Register with the web site. • Post their resume. • Modify their resume. • Search for job postings. • Browse searched job postings. • Add job posting to their favorites list. • Add frequently used searches to their favorites list. <p>The employers can perform following operations:</p> <ul style="list-style-type: none"> • Register with the web site. • Enter profile of their company. • Post one or more job postings. • Modify the job postings. • Search the resume database. • Browse searched resumes. • Add resumes to their favorites list. 	<p>DOT NET</p>
<p>43. BUG DETECTOR</p>		<p>DOT NET</p>

The project is a developed based on the standards of the coding used by the developer is tested before giving to the client. System that interacts with the code developed by the user. Using this project any developer with minimal knowledge can easily check correctness of the code easily without any errors.

Though the proposed system doesn't answer all the above mentioned drawbacks, it certainly answers many. The suggested solution will tackle all the major issues related to transmitting, tracking, updating the statuses with minimal overheads.

The proposed solution contains a simple intranet or internet based website, which will be accessible to all the programmers participating in the development project. All these personnel will have to authenticate themselves to report any kind of problem aroused in developing the specified project. These problems will be carried to the concerned developer for solution. It also makes the administrator to administer these issues or bugs centrally to ensure these issues or bugs are answered in time by the concerned programmers.

The Bug Issue Management intranet / internet application also keeps the track of all the issues either addressed, or to be addressed. One can search through the archives for related issue details, but at the same time proper security is incorporated into the software enabling only the related developers can go to in depth details. And only these people can respond to those unanswered issues or bugs.

The centrally managed database makes the administration easy. It provides summarized information about the issues, bugs, and problems. It also provides standard bookmarks to find out related bug issues that logged developer. Bug Issue Management application also incorporates rigorous search engine to find out any kind of bug issue for its details.

Finally, it is planned in such a way that administration of the Bug Issue Management Application itself is in very easy and intuitive way giving the administrators an easy walk over it.

44.	ENTERPRISE ORGANISER	DOT NET
Every Organization has many managers, who are responsible for all the activities in		

the organization. These managers manage different aspects of the organizational management issues, such as manufacturing, production, Marketing, etc; one such essential management issue is ENTERPRISE ORGANISER

As years progressed, the approach of the management changed towards the human capital. Now Hierarchical Organization is part of every organization, and has its own identity and importance. In this scenario, the bigger organizations need to put lot of effort in the management of human Resources, as they are underlying capital asset to the organization. In doing so, along with times, the Organization Information changed from its basic operations to more strategic approach.

Some of the features are.

- Finding ground level employee performance by the topmost manager.
- Maintenance of profile details of the employees, and retrievals as and when required.
- Overall & detailed view of the organization hierarchy, which is very much essential in making effective decisions.
- Judging the potentiality of the employees.
- Maintenance of the data when the organization has many branches spread over wide geographical area.
- Accessing one branch information from another branch.
- Future planning issues based on the current HR information.
- Employees success planning.
- Vacancy situations and their priority /effect on the organizations performance.
- Employee motivational & conflict resolving issues.

45. CIVIL REGISTRY

Civil Registry is the online system or agency to help the Indian citizens to apply for there government records like passport, driving license, voter's ID card, PAN card etc... And register certificates like birth, death, marriage etc.

The primary objective of this web site is to give awareness about the government or legal documents and its registration details as well as to help to register or apply for those documents. This also acts as a consultancy agency to assist the public. The main purpose of the web site is to reduce the effort by the candidate and save his time and avoid unwanted rushes at the government offices and assure a smooth working schedule at government offices.

DOT NET

	<p>The project Civil Registry still requires more development of IT solutions and its applications to improve the issuance of copies of government certificates and legal documents. Civil registry team trying to get more affiliation to government offices and departments. Now civil registry team acting as a agency to help the public.</p>	
<p>46. SOCIAL NETWORK</p>	<p>The project social network is used for maintaining the relationship between people who finds little time to hang out with the people. Every user who has their profile registered in social network. Each and every user has own profile and space where they can store their particulars.</p> <p>A social network is used to provide individuals a chance to mingle with each other. The network is configured for translating the view idea or plan into the master database to affect assignments including a list of blogs, groups created by each of the users.</p>	<p>DOT NET</p>
<p>47. JOB PORTAL</p>	<p>Job seekers- Job seeker, who is searching for job can enter the website, they can register and build their resume for free of cost.</p> <p>Employers – The employer can enter the website & create their own account for free of cost. They can post job & search employee database.</p> <p>Admin- The full control over the users & their functions</p>	<p>DOT NET</p>
<p>48. PROJECT MANAGEMENT</p>	<p>The project titled 'Resource Scheduling System' is developed to enable network access of the resource scheduled to the persons in an IT company over the web browser. The existing system was not network enabled, it was developed using windows application.</p> <p>Each and every client was required to install the software to connect to the centralized database server to check out the resources and tasks. It was a tedious work because if the software got corrupted then it needs to be reinstalled again. In each and every system it was required to configure the server settings to connect to the centralized database server when ever the software is installed.</p> <p>If the server gets down then we should have a secondary server, and we should configure the client machines application also to connect to the secondary server.</p>	<p>DOT NET</p>

	<p>There are number of advantages over the existing system, in the existing system we should deploy the software application in each client machine, but in case of proposed system we don't need to deploy the application in each client machine. We need to deploy it only on the central server called the IIS (Internet Information Services).</p> <p>The software application can be accessed through the browser. We don't need to deploy it on each client machine. If we specify the URL path in the browser, the application will be opened with the default form or page. Each and ever authentication is stored to maintain the session, the corresponding page will be opened with rights according to the authentication rights for each and every user who logs on.</p> <p>A centralized application server is maintained to control the over all transaction, in the existing system application server does not exist. In the application server we deploy the software application which enables the clients who are connected to access the application globally.</p>	
<p>49.</p>	<p>ONLINE TRADING TRANSACTIONS</p> <p>The Online Trading Transactions is a system, designed to automate the trading transactions of an organization. The Trading transactions involve the transactions between the organization and the suppliers, commodities maintained, types of commodities, details of the suppliers of the commodities, details of the purchasers of the commodities and so on.</p> <p>In this the design includes the factors of data maintenance and details of orders, their duration, status information and the details of purchasers who had raised the orders with the list of commodities specified in the order. Every order is to be traced and the required commodities, their availability has to be traced and the required commodities, their availability has to be checked and if not available immediately the supplier is to be informed for the supply in time. Covering the above and more issues in the design can give us a complete set of online trade oriented software</p>	<p>DOT NET</p>
<p>50.</p>	<p>CRIME REPORT MANAGEMENT SYSTEMS</p>	<p>DOT NET</p>
<p>51.</p>	<p>PRISON MANAGEMENT</p> <p>This project is aimed at developing a Jail Supervision that is a collection of registers and reports for the effective management of prisons. This system should contain the</p>	<p>DOT NET</p>

	modules like nominal roll, case register, parole register, Education, Training and In-out register	
52.	<p>P-PMOBILE BILL PAYMENT</p> <p>The purpose of the present study was to explore consumer value in mobile banking and in mobile bill paying especially. Today mobile communications technologies offer an opportunity for vast additional value for consumers' banking actions due to their always-on functionality and the option to bank virtually any time and anywhere. However, consumer value differs between individuals. It was measured in the context with five items namely privacy, accuracy, convenience, control and efficiency.</p> <p>An Internet questionnaire was developed and 82 usable responses from the users of mobile bill paying were collected. K-means clustering was used and five different value segments were identified. The results indicate that privacy and efficiency are the most valued items in mobile bill paying in general while individuals differing in their valuations. The study provides academics and bank managers with better understanding to consumer value in mobile banking and offers indications for value-based consumer segmentation</p>	<p>DOTNET</p>
53.	<p>POWER GENERATION COMPANY MANAGEMENT SYSTEM</p> <p>Client Application is developed for smooth process of E-Mail transfer between Generating Units and the Genco Head-Quarters. This application is developed from client's point of view and by keeping his requirement in mind.</p> <p>Client Application is purely in GUI mode and it is user friendly. This documentation will help the users to work efficiently with this application. This project deals comprehensively about the Mailing system of Apgenco. Here we'll find the communication between Generating Units and AP-Genco Head Quarters.</p> <p>The basic purpose of this project is to change the existing manual system of recording the information in records into computerized so that it is very easy and efficient to maintain the records and facilitates the user for future references and forecasting.</p> <p>The project has been planned to be having the view of distributed architecture, with centralized storage of the database. The application for the storage of the data has been planned. Using the constructs of MS-SQL Server and all the user interfaces</p>	<p>DOT NET</p>

	<p>have been designed using the ASP.Net technologies. The database connectivity is planned using the “SQL Connection” methodology. The standards of security and data protective mechanism have been given a big choice for proper usage. The application takes care of different modules and their associated reports, which are produced as per the applicable strategies and standards that are put forwarded by the administrative staff.</p>	
<p>54. FOOD ORDERING SYSTEM</p>	<p>The main objective of this project is to develop a system for a Five Star Hotel in which its customers can order online for recipes from anywhere. The system will help the users in displaying the list of recipes items available in that restaurant along with the offers available for those recipes items. The system will also display the images of the recipes items along with the list of items. The accessibility to the system in the restaurant will be given to the Administrator with the user name and password.</p>	<p>DOT NET</p>
<p>55. Health Care Management System</p>	<p>Health Care Management System is developed for smooth working of Indian Therapy and massage Industry. This is Practice Management Software for Doctors and Indian Therapist, which leads to smooth working of Indian Therapy and massage organizations.</p> <p>The main aim of the developing the project is to automate the entire information. The past system is the manual system, where all information is stored in the form of records. If the doctor wants to know the progress or information about an old patient manual search is needed, which is time consuming process. The present system is developed for making common interface between the employees, administrator and doctor.</p> <p>The application provides automated case management, patient scheduling, diagnosis notes, electronic mail integration to remind patient about their appointment, electronic revisit letter with paperless environment, Point of Sales (POS), inventory for spectacles, lenses and sundries and unlimited custom and pre-built reports.</p>	<p>DOT NET</p>
<p>56. AIRLINE MANAGEMENT SYSTEMS</p>	<p>The “Miles Acquisition System” helps Airlines serve their fliers by following a tailored version of the organization’s standard process called “The Frequent Flyer Program”. The goal of the MAS is to ensure that fliers login, view and manage their acquired miles through a beautiful, user friendly front-end. This document records</p>	

	<p>the transactions of the user like all the details of his acquired miles in their airlines. Through this application, the Airlines can automate the process of updating the various details associated with its scheme for frequent fliers; thus, avoiding manual or telephonic overhead involved in providing information and book keeping.</p> <p>The user, by entering his unique user id and password, can login to his account and avail the online services like checking the no. of miles acquired, and the various benefits entitled to him for it. The airlines, on the other hand, can make its announcements on new schemes to be introduced. This kind of application over the internet enhances the chances of attracting new fliers as well as retaining the old ones.</p>	
<p>57. RTO Management</p>	<p>The System keeps track of the transactions in the RTO office. It maintains Renewal of learner's License, Renewal of permanent license, Issue of learner's license, Online LLR Form, Registration Form, Issue of permanent license, payment against challan and finally it produce printouts to payment of customers.</p>	<p>DOT NET</p>
<p>58. EXPO MANAGEMENT SYSTEM</p>	<p>With the increasing growth in the number of industries and the competitive run for the trophy of perfection and profit, these industries round the globe are in the lookout for a roof to exhibit their products in the most convenient ,profitable and successful means. Chambers of Commerce and Industrial Associates around the world conduct expos or large trade fairs and exhibitions with the aim of promoting their products and companies. The organizers face a huge amount of effort in conduction such large scale expos. Nevertheless organizing such exhibitions not only give companies good exposure but also servers to agree upon big deals and agreements with other corporate or potential clients.</p>	<p>DOT NET</p>
<p>59. TRACK MANAGEMENT SYSTEM</p>	<p>Railways is a big organization which need to maintain the details of different things like tracks and their material so it is tedious job to maintain all these details manually, in order to overcome this problem track procurement management system is providing the successful tools and techniques to a broad range of activities like maintaining inventory of the material needed for tracks like bolts, nuts, joints etc...,the project mainly contains the modules like material purchasing, material issuing, stock maintenance, zonal issuing,</p>	<p>DOT NET</p>

	<p>monitoring of track machines.</p> <p>Each user willing to avail the services offered by the mail server application should exist as a user before he can send or receive mails. This is made possible by prompting each user to enter his user-id and password before he can send or view his mails.</p>	
<p>60.</p>	<p>TRANSPORT MAINTENANCE</p> <p>This application is a Transport Management Information cum Automation System this project is aimed at automation of a Travel Agency. Objective of the project is to develop customize software package for Travel Agencies. The system also provides a comprehensive mechanism of transport maintenance for any travel agency. Intelligent Transportation System is designed to help wide range of travel agencies come together and provide service to the customer. This System comprehensive functionality helps the agencies expand their horizons in the field of providing transport maintenance to the management.</p> <p>The project deals with the automation of the Transport information System. This project explains about the transporters how exactly the maintenance of the transport system works, whether the transport may be of Passengers. The System clearly deals with all the information of the Transporters; firstly they define the transportation type and their name. Next it deals with the operation, how exactly the system works and who are all involved in the system.</p>	<p>DOT NET</p>
<p>61.</p>	<p>E CASH CONTROLLER</p> <p>This project is mainly developed for the Account Division of a Banking sector to provide better interface of the entire banking transactions. This system is aimed to give a better out look to the user interfaces and to implement all the banking transactions like:</p> <ul style="list-style-type: none"> • Supply of Account Information • New Account Creations • Deposits • Withdraws • Cheque book issues • Stop payments • Transfer of accounts • Report Generations. 	<p>DOT NET</p>
